PHASE 5 – PROJECT DEVELOPMENT

Project Title: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

5.1 Project Development

The Project Development phase focuses on implementing the complete IT procurement automation workflow in the ServiceNow platform. During this phase, the Service Catalog item, Flow Designer workflow, approval process, and Catalog Task automation were developed and integrated to create a fully automated laptop procurement system.

5.2 Service Catalog Development

A Standard Laptop Order catalog item was created in the ServiceNow Service Catalog to allow employees to request a standard laptop.

Request Form Fields

- Employee Name
- Employee ID
- Department
- Laptop Model
- Business Justification
- Delivery Location

Mandatory field validation was enabled to ensure accurate request submission.

5.3 Flow Designer Development

The workflow was created using Flow Designer to automate the laptop procurement process.

Flow Development Steps

1. Trigger the flow when a laptop request is submitted.
2. Create a Request (REQ) automatically.
3. Send the request for manager approval.
4. Verify the approval response.
5. Generate a Catalog Task after approval.
6. Update the request status automatically.

5.4 Approval Process Development

The approval workflow was configured to send the request to the reporting manager.

Approval Actions

- Manager receives the approval notification.

- Approved requests move to the next stage.
- Rejected requests are closed automatically with the rejection status.

5.5 Catalog Task Development

After approval, Flow Designer automatically creates a Catalog Task for the IT Support team.

Catalog Task Activities

- Assign task to IT Support.
- Prepare the requested laptop.
- Allocate the laptop to the employee.
- Update the task status after completion.

5.6 Workflow Implementation

The implemented workflow follows this sequence:

Employee submits request → Request created → Manager approval → Catalog Task created → IT team processes request → Laptop allocated → Request closed successfully.

5.7 Testing During Development

Each workflow component was tested during development to ensure proper execution without manual intervention.

Validation Performed

- Request submission validation.
- Approval process validation.
- Catalog Task creation validation.
- Request status update validation.

5.8 Development Outcome

The project successfully automated the standard laptop ordering process in ServiceNow. The workflow reduced manual work, improved approval efficiency, generated Catalog Tasks automatically, and enabled complete request tracking from submission to completion.

Conclusion

The Project Development phase successfully implemented an end-to-end automated IT procurement workflow using ServiceNow Flow Designer. The developed solution ensures faster request processing, automatic approvals, task generation, and efficient laptop allocation.
